

Technical drawing of a mechanical assembly, likely a bracket or support structure, showing dimensions and material specifications.

Dimensions:

- Overall height: 175
- Distance from base to center of the horizontal plate: 87,5
- Distance from the vertical centerline to the center of the horizontal plate: 50
- Thickness of the horizontal plate: 8
- Thickness of the vertical plate: 4

Materials:

- stainless steel (indicated by diagonal hatching on the vertical plate and the two angled plates)
- black steel (indicated by cross-hatching on the horizontal plate)

The assembly consists of a vertical plate (stainless steel) and a horizontal plate (black steel) joined at a central point. Two angled plates (stainless steel) are attached to the vertical plate, extending outwards and downwards. The horizontal plate is attached to the vertical plate, extending outwards and slightly downwards. The angled plates are secured with bolts/nuts. The horizontal plate is secured with a bolt/nut. The vertical plate has a small notch at the bottom.

The technical drawing illustrates the 'Armoured joint Conecto Sinus' in two views: a cross-section (SECTION) and a perspective view (VIEW).

SECTION: This view shows the internal structure of the joint. It features a central vertical rod labeled 'black steel' with a diameter of 8 mm. This rod is surrounded by a sleeve labeled 'stainless steel' with a thickness of 4 mm. The sleeve is secured by a nut and washer. The overall height of the joint assembly is 50 mm. A dimension of 5 is also indicated on the left side.

VIEW: This perspective view shows the joint installed in a concrete wall. The joint is a long, narrow, rectangular profile with a series of vertical ribs. It is secured to the wall by several horizontal rods (anchors) passing through the profile and into the concrete. The profile is shown in a perspective view, highlighting its length and the spacing of the ribs.
